Advisory Action

1. This communication is responsive to the after-final amendment dated 07/08/2004.

Response

2. The newly proposed amendment has been fully considered, but it does not to be persuasive for placing the application in the condition for allowance.

The cited reference (U. S. Pat. - 5,249,236) does clearly show a damper (1-2) for loudspeakers, comprising a damper body (1) having corrugations, an adhesive agent (8) applied to one surface of the damper body, and tubular knitted tinsel cords (2) bonded to the damper body through the adhesive agent. But Sakamoto does not specially teach the details of the adhesive agent as claimed. Since providing a suitable, especially, commercially available adhesive agent having a desirable viscoelasticity for bonding the conductive tinsel cords to the damper of the speaker is very well known in the art, it therefore would have been obvious to one skilled in the art at the time the invention was made to provide a suitable and commercially available adhesive agent, such as BOND-7 for assembling the loudspeaker, and further, with desirable adhesive agent for making the loudspeaker more durable.

Regarding claims, the applicants argue no motivation to combine the references. It is not necessary that the references actually suggest, expressly or in so many words the changes or improvements that applicants have made. The test for combining references is what the references as whole would have suggested to one of ordinary skilled in the art. In re Sheckler, 168 USPQ 716 (CCPA 1971); In re Mlaughlin 170 USPQ 209 (CCPA 1971); In re Young 159 USPQ 715 (CCPA 1968).

Application/Control Number: 10/044,018

Art Unit: 2643

Page 3

As to the combination of cited references has failed to teach applicants' claimed invention, the Examiner respectfully disagrees. The combination of these references teaches the recited claim limitations.
